Opportunity: Mainframe Security Consultant/RACF Systems Programmer

Global Technology Solutions Group (GTSG) is a 35-year-old consulting services company focused on Mainframe systems since our inception.

We are seeking a Mainframe Security Consultant with deep RACF systems programming experience as well as knowledge of competitive mainframe security products.

Anticipated activities and skills include:

- Assessment and documentation of current mainframe configuration - identifying existing groups, permissions, etc.
- Lead workshops and other discovery activities to fully understand security requirements
- Design of a RACF-based security environment to meet client requirements and offer improvements based on RACF capabilities
- Implement RACF environment and migrate existing security controls to the new environment. This activity may include:
    - RACF installation and maintenance
    - Develop Role Based Access Control framework
    - Creation of RACF data structures
    - Implement RACF logging and report generation
    - Configuration of security controls for volumes, datasets, etc.
    - Configuration of security controls for other subsystems (DB2, IMS, CICS, etc.)
    - Potentially design and implement - Pass Phrase, Single Sign On and other facilities
- Provide consulting services to Client's IT Security Logon ID Administrators, Developers, Technical Support and other mainframe staff as needed
- Excellent customer-facing skills

It would be a bonus to have z/OS and broad ISV experience as well as REXX skills.

At the present time, all activities are remote and unlikely to change. Compensation based on experience, architecture & leadership skills among other factors.
